

Prathamesh Mali

Senior Software Engineer · 5+ Years

pratham82.in · github.com/pratham82 · linkedin/prathameshmali · mali.prathamesh82@gmail.com · Mumbai / Bangalore, India

5+ yrs Frontend engineering

30% Lift in partner daily sales

40% Increase in appointment bookings

100+ Stores on mobile seller platform

Summary

Senior Software Engineer with 5+ years building React.js, Next.js, and React Native products across enterprise e-commerce, healthcare, and fintech. Currently leading a checkout pod at Publicis Sapient on lululemon's platform modernization and applying AI-native engineering practices in production. Track record of real-time systems, offline-capable mobile apps, and design systems that move measurable business metrics.

Experience

Feb 2021 – Present · 5 roles, 4 companies

2021 Foundation

Back-to-back contracts at Edulab and Edstem built full-stack MEAN and Angular delivery discipline before specialising in React.

2022 Consumer scale

Owned appointment booking and order flows at Mosaic Wellness across three health brands on web and React Native; validated in WebView then rebuilt natively.

2025 Enterprise & AI-native

After leading real-time tracking and offline mobile sales at Blitz Electric, joined Publicis Sapient to lead a checkout pod on lululemon's platform modernization using AI-native engineering.

Publicis Sapient · lululemon Checkout Platform · Jul 2025 – Present

SENIOR EXP. ENGINEER

- ROLE** Pod lead on lululemon's ecommerce checkout team, owning the promotions and discounts domain within a micro-frontend architecture serving global e-commerce traffic.
- ACTIONS** Migrating a legacy JavaScript checkout codebase to **Next.js + TypeScript**; driving technical discussions, code reviews, and blocker resolution as pod lead. Building with GraphQL, Apollo Client/Server, and Zustand. Applying AI-native practices — GitHub Copilot agentic workflows, Claude Code, MCP integrations, and context engineering — to accelerate delivery.
- IMPACT** Leading pod delivery on a global ecommerce modernization initiative. AI-native tooling measurably shortens development cycles and improves engineering throughput across the checkout domain.

Publicis Sapient · ADCB Banking · Jul 2025 – Present

SENIOR EXP. ENGINEER

- ROLE** Contributed to cross-platform digital banking solutions for ADCB, building web and mobile features using React Native (Expo), XState, and Tamagui.
- ACTIONS** Built a phonebook integration component to streamline new user onboarding. Designed and implemented a generic approve/decline workflow reusable across multiple banking modules. Primarily contributed to the Mandates module, enhancing functionality and UX.
- IMPACT** Generic approval workflow improved **reusability and consistency** across banking modules, reducing duplication for the approve/decline pattern across the app.

Blitz Electric · Mobile Seller Platform · Jun 2024 – Jun 2025

SENIOR SWE FRONTEND

- ROLE** Sole frontend owner of the partner-facing mobile sales app deployed across 100+ Blitz Electric stores in Indonesia, responsible end-to-end from design to production.
- ACTIONS** Built offline-first QRIS and cash transaction flows, geo-tagged return logging, and photo verification for dispute evidence. Queued transactions locally and synced on reconnect to handle variable network coverage across remote store locations.
- IMPACT** Drove **30% higher daily sales** and 80% fewer deposit disputes across 100+ partner stores by replacing manual cash reconciliation with photo-verified, offline-capable transaction records.

Blitz Electric · Shipping Fee Engine & Design System · Jun 2024 – Jun 2025

SENIOR SWE FRONTEND

- ROLE** Led two platform-level initiatives: a real-time shipping calculator for partner onboarding and a shared React component library published to npm as the design system baseline for multiple teams.
- ACTIONS** Built a dynamic fee engine (distance, weight, service type) replacing manual pricing spreadsheets. Built a Google Maps API order tracking system for Blibli and Lazada partners with periodic polling. Designed and published a React component library to npm as the shared UI contract for multiple teams.
- IMPACT** Fee engine lifted **order volume by 20%** and shortened partner onboarding. Design system adopted by two teams within the quarter, eliminating duplicate component work. Order tracking reduced support queries by surfacing delivery status proactively.

Mosaic Wellness · Consultation & Appointment Platform · Jun 2022 – Apr 2024		SDE 1
ROLE	Owned doctor consultation and appointment booking across web (Next.js) and React Native apps for three consumer health brands — manmatters.com, bebodywise.com, and ourlittlejoys.com.	
ACTIONS	Prototyped the consultation homepage as a WebView, validated conversion signals, then rebuilt it natively in React Native. Shipped an Instant Appointment System on web and a chat-based booking flow in mobile. Revamped the Track Order page to surface delivery status inline, reducing in-app query volumes.	
IMPACT	Native consultation page delivered 40% higher appointment bookings and 10% fewer drop-offs. Track Order revamp cut "where is my order" support queries by 5% across all three brands.	

Edstem Technologies · Lead IAS & Woodside · Jul 2021 – Apr 2022		SOFTWARE DEVELOPER
ROLE	Frontend developer across two client engagements: a student-facing test platform (Lead IAS) and an employee compliance dashboard for an Australian resources company (Woodside).	
ACTIONS	Lead IAS: Angular Ionic quiz module and admin dashboard for quiz creation and management. Woodside: React compliance dashboard with Jest unit test coverage for core compliance logic.	
IMPACT	Two production client apps in 10 months — established Angular Ionic, React, and test-driven development before moving to product roles.	

Edulab · SDBMI LMS & Certificate Generator · Feb 2021 – Jun 2021		SOFTWARE ENGINEER
ROLE	Full-stack engineer on two tools: an LMS for SDBI students and a bulk certificate generation utility — both shipped in five months as the first professional engineering role.	
ACTIONS	SDBMI LMS: MEAN stack end-to-end — attendance management, exam workflows, and student-facing course flows (Angular + Node.js). Certificate Generator: Node.js + pdfmake tool for bulk academic certificate production with dynamic layout templating.	
IMPACT	Shipped a production LMS used by SDBI students; established MEAN stack fundamentals that underpinned all subsequent backend work.	

Technical Skills

LANGUAGES & CORE	TypeScript, JavaScript · React.js, Next.js, React Native, Node.js, Angular, Angular Ionic
FRONTEND	GraphQL + Apollo Client/Server, Zustand, Redux, XState · Tailwind CSS, Styled Components, MUI, Tamagui · HTML, CSS
TESTING & DX	Jest, React Testing Library, Storybook · GitHub Actions, Jenkins, Docker · Webpack Module Federation, Vite
AI & LLM TOOLS	Claude Code, GitHub Copilot, Cursor, Ollama, MCP Integration · Prompt Engineering, agentic workflows, context engineering
BACKEND & PLATFORM	Express.js, MongoDB, REST APIs · Vercel, Netlify · Xcode, Android Studio · Jira, Confluence, Mixpanel, Notion

Education

Mumbai University · Master of Computer Science · Grade 9.29 / 10	2019 – 2021
Mumbai University · Bachelor of Computer Science	2016 – 2019
